Internal cross-fitting
(103 eICU centres)
Recalibration attempts landing within ±10% (%)
shrinkage already beats
no recalibration at m = 25
21%
S0 no recalibration
S1 naive, intercept only
S3 empirical-Bayes shrinkage
Local patients used for recalibration (m)
Transfer to MIMIC-IV
(single new centre)
ã = +0.030, τ² = 0.131 (both from eICU)
true offset to recover a* = +0.221
S3 at m=25 (47.0%)
≈ S1 at m ≈ 150
no recalibration: 0%
Local patients used for recalibration (m)
